Da Eun Ok, Chen Yu Tian, Yi Heon Lee

»Re-Fashioned« is an upcycling fashion project by BA fashion design students at Hongik University, Seoul, South Korea. They have recreated new garments from ready-made objects and materials, including vintage clothes, packaging materials, umbrellas, toys etc. The main inspiration: Fluxus and Dadaism influence the way the artists reinterpret the materials, as well as the design and styling of the works and exhibition settings.

By uncovering the infinite possibilities associated with the creation of objects from any finished product, this project demonstrates that fashion has a reciprocal and cyclical relationship with every object and material in our environment.

J André Stache
/ DE /

Born in Nordhausen 1980, André Stache earned a diploma in design and completed training as a metal designer and artistic blacksmith. He now lives in Berlin, where he has been working intensively on artistic projects, sculptures and installations since 2004. Using »geometromorphistic« techniques, the designer takes disused objects from their familiar contexts and repositions them in the here and now in a striking manner. Through deconstruction and recombination, works of remixed origin are created from two- and three-dimensional objects.

The subject »Upcycling« led me to the scrapyard, where I discovered these old number plates. Considering the fact that recycling aluminium is very costly and harmful to the environment, I decided to take them with me. Their aesthetics and typography were fascinating, so I decided to work with them. When fanned out, they reminded me of the back part of beetles. This made me think about the back of humans, so I bent them slightly and voila: they made a perfect seat shell.

Neues aus Altem. Weggeworfenes Wiederverwerten. Perspektiven und Sichtweisen ändern. Langlebigkeit fördern. Wandel und Wiedergeburt. Die folgenden Arbeiten sind aus Weggeworfenem entstanden. Altkleider und Altkleider werden zu Neuem in einem neuen Kontext zusammengesetzt. Jeanshosen bekommen eine zweite Chance, werden zu einem Mantel. Ein Hemd wird zu einem Rock. Ein Pinselauswaschtuch wird zu einer Jacke.

/New from old. Upcycling discarded waste materials. Changing perspectives and perceptions. Promoting product longevity. Transformation and rebirth. The following works were created from discarded waste materials. Waste paper and used clothing are transformed into new products in a new context. Jeans are given a second chance in the form of a coat. A shirt becomes a skirt. A cloth for cleaning paintbrushes becomes a jacket.

L SELVITA
/ COL /

/SELVITA was born in 2014. It is a clothing brand from Colombia, fostering education for biodiversity preservation through art and design.

This is an initiative of two Colombian artists and a designer who wanted to promote awareness about biodiversity and animal protection among children.

SELVITA means Little Jungle in Spanish. It promotes fauna and conservation through unique and hand-printed T-shirts for children and adults (family brand), as well as through creative workshops of textile recycling targeting children.

The SELVITA team has offered numerous workshops in Colombia and collaborated with many museums and conservation organisations through the brand's products and campaigns: »We know how to bring together biodiversity education, art and design.«

M Clemens Schebiella
/ DE /

Unter dem Aspekt Upcycling entdeckte ich polnische Überführungskennzeichen auf einem Schrottplatz, deren Recycling aufwendig und umweltschädlich ist. Ihre Typografie und Ästhetik war so faszinierend, dass ich diese Schilder mitnahm. Beim späteren Betrachten assoziierte ich den Aufbau eines Rückenpanzers von Käfern, indem ich die Schilder fächerte. Durch die leichte Biegung erlangte ich eine Schale, woraus ein Sitz entstand, der einzigartig ist und dem Abfall einen neuen Wert gibt.

»Vergiss mein nicht«
Begünstigt durch stetig wechselnde Modekollektionen und den Verlust der persönlichen Bindung zu Produkten entstehen in Deutschland rund 750.000 t Altkleider jährlich. Das ist Rang 1 in Westeuropa. Nach langer Experimentierphase, in der das Zerkleinern und das Fügen der Altkleider mit unterschiedlichen Bindemitteln und das Hämmern der Kleider zentral in den Mittelpunkt gerückt und mittels Beleuchtung neu in Szene gesetzt.

/»Forget-me-not«
Owing in part to the constantly changing fashion collections and the lack of personal ties to products, around 750,000 tonnes of used clothing are thrown out in Germany every year. That's more than any other Western European country.
After a long experimental phase focussing on different options for shredding the old clothing and processing the resulting scraps with various binders and techniques, a light, thin and yet surprisingly robust material was created through pressing, using the simplest natural means. As lampshades, the old clothes are moved back into the centre of the room and presented in a »new light«.

O Gabriel Wiese
/ DE /

Der deutsche Künstler Gabriel Wiese lernte den Beruf des Schreiners, wo er die Möglichkeiten des Materials Kork für Möbel- und Objektbau entdeckte. Das Experimentieren mit Design und verschiedenen Bautechniken - von der Bereitstellung von neuen Möbeln über die Schaffung neuer Formen mit einer Stahlinfrastruktur und der Anwendung eines Korkführers bis hin zu Werken aus Kork - ist es ihm gelungen, »einfache Möbel in Kunstobjekte zu verwandeln.« Neben Korkstühlen hat Gabriel Wiese auch Teppiche, Bilder, Tische, Schachbretter und Kleider geschaffen.

/German artist Gabriel Wiese was studying to be a cabinetmaker when he discovered the versatility and advantages of cork as a material for furniture and object construction.
By experimenting with design and various building techniques - from covering existing furniture or creating new forms with steel infrastructure to applying a cork veneer or creating works made entirely of cork - he has succeeded in »changing simple furniture into works of art.« In addition to cork chairs, Gabriel Wiese has created carpets, pictures, tables, chessboards and clothes.

/ IT /

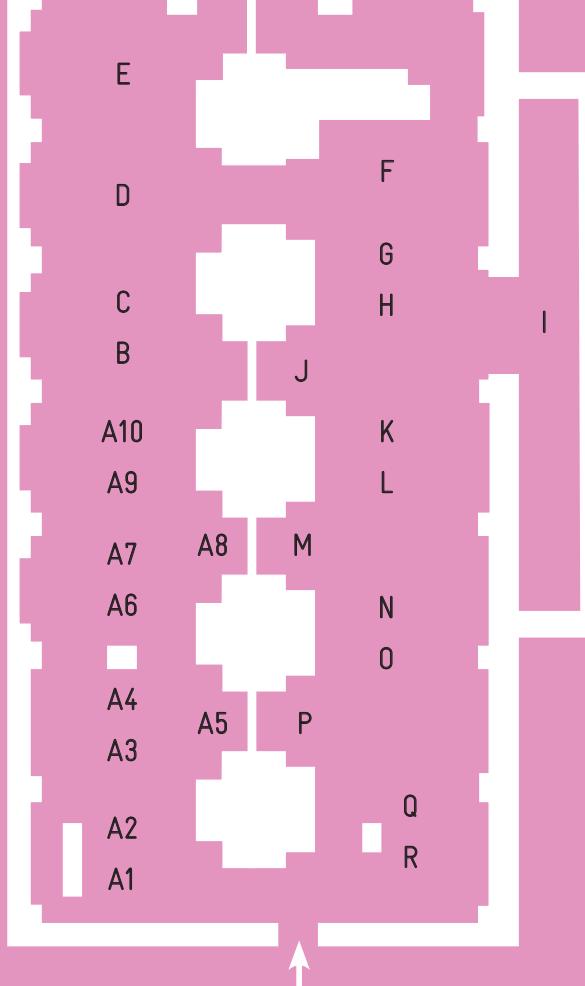

/In 2008, fulfilling my childhood dream, I started the »career« of »operator of own ingegno«, participating in various artistic and craft initiatives, also internationally. This work was focused on creating upcycled works from used materials, such as paper, cardboard, plastic and aluminium. In 2012 I teamed up with my dear friend Germana Leonelli to create the Brand PAGE DIAMANIA, a creative recycling project using old slides, which had become obsolete with the birth of digital photos. Working with the »old« slides, I create eco-fashion bijoux, green fashion accessories, small furnishing accessories and designs/sculptures. Each model is a unique and original work.

A1 Song Joon Lee / KOR /

The stainless-steel bowl, which is easy to find being used in restaurants today, was once a strange object to Koreans, and yet it soon proliferated across the country. In the late 1960s, when Korean War had ended with a truce, the food-price instability forced the government to come up with standardised metal bowls, which we still use today. Although it was merely a stopgap, the government was trying to reduce the unequal wealth (rice) distribution to rescue as many people as possible through this regulation. Such an attempt at coexistence should not be limited to relationships between people. The human race should be aware of the threats they are making against balance and coexistence. If the relationships between individuals, an organization and an individual, nature and animals, and the environment and human beings lose their balance, it can put an individual's life, including your life, in danger, too. One should remember that an individual's efforts cast a long shadow, and that is what this work intends to remind the audience of.

www.instagram.com/songjoon_lee

A2 Hee Suk Park / KOR /

Using the air cap for insulation, she designs a fancy ruffled dress and a passionate free-formed red dress with onion nets. She shows a dress with a fabric reminiscent of a snack pack. It is epoch-making work that can break through our own prejudice and formality.

A3 Fori Sim / KOR /

All the living things in this world are an aggregation of matter. Tiny cells are born with a timeline through aggregation and then die away.

A being made up of various matters will eventually be reborn as a different being as time passes. This rule also applies to inorganic substances. I disassemble and relocate these »beings« that can no longer function, and recreate them as robots, as new »beings«.

In this modern society there are countless beings, non-living, feelings and morals being thrown out every second, but it seems difficult for them to be reborn into something else. I hope these newly shaped works made from junk and the fresh stories within will bring joy to mundane lives.

A5 Harlie Kim / KOR /

»The Better Blue« series consists of upcycled denim bags and accessories, portraying sustainable fashion that displays pre-loved materials and textures to be loved once more in a new form. Our customers are able to gain hands-on experience. Their donations of various used denim items become the main components of the finished product. From bleached white to charcoal blue, these donations are put to miscellaneous uses.

The name »The Better Blue« is inspired by the idea that pre-used denim with its varying characteristics, like being thinly stretched, full of holes or falling apart, brings out something that is impossible to make in a factory. The stripe design intertwines the versatile textures of different worn-in denim fabrics. Thus, this product emphasises the fact that materials have a history and now a new future that is not only better for the environment but also a revamped preservation of memories.

Blue becomes green. Denim jeans, the article of clothing that the majority of us own and many have too much of, doesn't go to waste and becomes re-formed to something new, leaving zero waste.

The series aims to take a step back from the uneconomical denim industry and reform pre-loved materials to extend their life spans.

The concept is to make denim more sustainable and more valuable without chemicals, preserving memories and saving the environment as an upcycled item.

B Supermüll / DE /

»Supermüll« steht für nachhaltiges Design und durchdachte Upcycling-Produkte. Kreativ nutzen wir ausgediente Materialien und Objekte, werten sie auf und fertigen innovative, hochwertige Produkte. Unsere Workshops fördern das Bewusstsein für die Themen Umwelt & Konsum, Müllvermeidung und Design. Wir untersuchen Wertstoffkreisläufe und beraten die Industrie, wie sie Abfallprodukte vermeiden, reduzieren oder zu nutzbaren Objekten verarbeiten kann.

Maßgeschneidertes Upcycling – wenn aus Müll Supermüll wird.

»Supermüll« is German and literally means super waste. We design, produce and present sustainable products of high design quality. Our products are made of used materials which are too good for the bin. Analysing recovered substance cycles we show companies how to prevent, reduce or use their waste to turn it into economically and ecologically worthwhile objects.

We offer individual upcycling solutions and create workshops for everybody about sustainability and design.

www.supermuell.de

Arbeit und Liebe zum Detail zu Möbeln umgestaltet. Die Möbel sind aus 100% Abfällen der Berliner U-Bahn des Typs F76 und F74 gefertigt.

/Anyone who has ever been to Berlin is familiar with the city's U-Bahn and the unique red-and-blue camouflage design of its seat cushions. Some love it. Others hate it. Regardless of people's opinions, it has become a part of Berlin. However, this pattern's days are numbered. Fewer and fewer U-Bahn trains are crisscrossing the city with these seat cushions. They are gradually being phased out and replaced with a new seating design. As a result, another chapter of design history is slowly disappearing. What a loss! The »F76« furniture collection pays homage to the attention-grabbing design of the Berlin U-Bahn from the 1970s, which is currently undergoing extensive modernisation. The discarded upholstery and interior walls are transformed into furniture with an impressive attention to detail. The furniture is made of 100% waste material from the type F76 and F74 Berlin U-Bahn trains

www.hierundjetzt-leipzig.de/artists-show/raphael-biller.html

with craftsmanship, art and the integration of people with social, physical and/or psychological disadvantages on the job market. The workshop in Pécs, where roughly 30 people work, upcycles old clothing to produce furniture, seating products, (spatial) installations, tapestries, carpets, bags, clothing, jewellery and accessories.

The cooperation between the workers of the various production steps, together with the transparent and easy production techniques, promotes a sense of community and an awareness for sustainable development. This approach and project, which was initiated more than 15 years ago, can now be found in therapeutic facilities in Hungary. Lectures and workshops are offered for educators and other interested individuals.

G Frank Gibbemeyer / DE /

Gibbemeyer ist ein Leipziger Label, das sich dem Design & Bau nachhaltiger Möbel & Lampen aus recycelten & upgecyelten Materialien verschrieben hat. Die verwendeten Hölzer sind zum Großteil upgecycelt. Alte Gerüstbohlen, Munitionskisten, Schubladen usw. finden hier eine umweltgerechte Wiederverwendung. Die verarbeiteten Kunststoffe sind Reste diverser Betriebe rund um den Standort Leipzig, welche gewöhnlich in der Müllverbrennung landen. Die verbauten Metalle stammen von Recyclinghöfen. Durch materialgerechte handwerkliche Auf & Verarbeitung entstehen neue, ressourcenschonende schöne Möbel und Lampen.

/Gibbemeyer is a Leipzig-based label committed to the design and construction of sustainable furniture and lamps using recycled and upcycled materials. Most of the woods used are upcycled. Old scaffold boards, ammunition boxes, drawers etc. are reused in an environmentally responsible manner. The plastics used in the designs are waste materials from various factories in and around Leipzig that would normally be incinerated. The metals come from recycling centres. New, attractive resource-efficient furniture and lamps are handcrafted through the appropriate use of materials.

E Daniel Garrion El Reinventor / SP / DE /

/El Reinventor was founded in Berlin in 2010. At our workshop in Berlin Mitte, we specialise in 3 main areas: jewellery, lighting objects and industrial furniture. All objects are unique and born from our commitment to sustainability. The process of reinventing is sometimes complex, and for that reason El Reinventor relies on a metal workshop with gas tungsten arc welding equipment, a jewellery workshop with 3D printing capabilities and a room full of tools that enable us to let our imagination run wild in the design and production of our beautiful lighting objects. Clients give their personal input for the creation of one-of-a-kind interiors and are also welcome to bring in their own forgotten treasures to be incorporated into the works. At El Reinventor, we offer more than simply products: we offer experiences.

www.elreinventor.com

F Gianluca Soldi / IT /

/SoldiDesign Ltd. was founded by the interior designer Gianluca Soldi and his son Tommaso Soldi. Due to his long-term experience in the interior design field, Gianluca Soldi developed the need to customise a location by completing it with objects whose task is to qualify and satisfy the material and spiritual purposes of space. The processes of designing and producing processes integrate tradition and technological innovation with a high aesthetic and functional value.

SoldiDesign designs and creates unique and standard objects as a result of an ongoing process of formal and functional invention, together with in-depth and careful artistic research.

Retextil ist ein innovatives Upcycling-Projekt aus Pécs/Ungarn. Es verbindet die Wiederverwertung von gebrauchten Textilien, Handarbeit, Kunst und die Integration von Menschen mit sozialen, körperlichen und/oder seelischen Benachteiligungen in den Arbeitsmarkt. In der Werkstatt in Pécs, in der ungefähr 30 Menschen beschäftigt sind, entstehen Einrichtungsgegenstände, Sitzmöbel, (Raum-) Installationen, (Wand-) Teppiche, Taschen, Kleidung, Schmuck und Accessoires durch die Aufarbeitung alter Kleidungen. Durch die Zusammenarbeit zwischen den verschiedenen Produktionsschritten und die transparente und leichte Herstellung der Produkte, wird das Gemeinschaftsgefühl und das Bewusstsein für nachhaltige Entwicklung gefördert.

Das Projekt, welches vor über 15 Jahren seinen Anfang nahm, und die Vorgehensweise findet sich mittlerweile in ungarischen therapeutischen Einrichtungen wieder. Es werden Vorträge und Workshops speziell für Pädagogen, aber auch andere interessierte gehalten.

/Retextil is an innovative upcycling project from Pécs, Hungary. It combines the upcycling of used textiles,

H Björn Bernt / DE /

WabenPappMöbel® Wabenpappe wird in meinem näheren Umfeld hauptsächlich als Sichtschutz, Präsentationsplattform und schnellen Modellbau verwendet. Spätestens nach einem Jahr findet sich für das »abgenutzte« Material keine Verwendung mehr und es darf von mir eingesammelt werden. Wenn genug Material zusammen gekommen ist, wird es in handliche Blöcke zerteilt und verleimt um in der Drechselbank und/oder der CNC-Fräsmaschine weiter verarbeitet werden zu können.

Alle Möbelstücke sind recycelt. Ich habe Versuche angestellt, die Pappmöbel mit einem Biokomposit aus Stärke wetterfest zu machen. Schlussendlich bleiben es aber einfach schöne leichte Möbel für den Hausgebrauch

/WabenPappMöbel® In my local area, honeycomb cardboard is regularly used for privacy protection, presentation platforms or quick modelmaking. Within a year or less, this »worn-out« material can be collected for upcycling projects. After I have collected sufficient material, I cut it into pieces, which are then glued together to make manageable
